# Project Internship – Intelligent Agents

## Winter 2023/2024

Magnus Bender

Institute of Information Systems – IFIS  
University of Lübeck

20. October 2023

UNIVERSITÄT ZU LÜBECK  
INSTITUT FÜR INFORMATIONSSYSTEME

- ▶ Groups of 2 or 3 students
- ▶ In total 3 exercises (around 4 weeks per exercise)
- ▶ Each exercise depends on the previous ones
- ▶ Short presentation of results
- ▶ Upload your solutions (zip containing code)

## Organisation

## Exercise 1

## Next Steps

- ▶ Groups of 2 or 3 students
- ▶ In total 3 exercises (around 4 weeks per exercise)
- ▶ Each exercise depends on the previous ones
- ▶ Short presentation of results
- ▶ Upload your solutions (zip containing code)

## Goal

Implementation of an intelligent information retrieval (IR) agent with SPADE

### Organisation

#### General

Schedule

#### Software

Docker-Container

Project Package

SPADE

#### Exercise 1

#### Next Steps

# Presentation

- ▶ Groups present their solution per exercise
- ▶ In the end all groups must have presented at least twice
- ▶ Around 15 minutes per group including questions
- ▶ Focus on your decisions and distinctions to others (audience solved same exercise)
- ▶ English or german depending on audience

SPADE

## Exercise 1

## Next Steps

# Presentation

- ▶ Groups present their solution per exercise
- ▶ In the end all groups must have presented at least twice
- ▶ Around 15 minutes per group including questions
- ▶ Focus on your decisions and distinctions to others (audience solved same exercise)
- ▶ English or german depending on audience

## Decisions and Distinctions

It is a project and thus tasks may be solved in different ways.

It is intended, that tasks are less restricted and students develop their own solutions.

# Schedule

## 20. October

- ▶ Release Exercise 1 (Deadline 17. November)

## 17. November

- ▶ Presentation Exercise 1
- ▶ Release Exercise 2 (Deadline 15. December)

## 15. December

- ▶ Presentation Exercise 2
- ▶ Release Exercise 3 (Deadline 26. January)

## 26. January

- ▶ Presentation Exercise 3
- ▶ *Roundup*

- ▶ Python 3.10
  - ▶ Smart Python Agent Development Environment (SPADE)
  - ▶ Natural Language Toolkit (NLTK)
  - ▶ Gensim
- ▶ Prosody IM<sup>1</sup>

---

<sup>1</sup>XMPP server needed by SPADE

Project Package

SPADE

## Exercise 1

## Next Steps

- ▶ Provide a Docker-Container containing everything for project
- ▶ Need to install Docker and run Container<sup>2</sup>
- ▶ Setup Guide<sup>3</sup> (mainly for Docker)

---

<sup>2</sup><https://hub.docker.com/r/kilabor/ia-project>

<sup>3</sup><https://www.ifis.uni-luebeck.de/~bender/lehre/ws2324/ia/setup/>

# Project Package

- ▶ Project Package in Moodle<sup>4</sup>
- ▶ Contains code for testing your setup (example Agent using SPADE) and some utility functions
- ▶ Structure to solve exercises in

# Project Package

- ▶ Project Package in Moodle<sup>4</sup>
- ▶ Contains code for testing your setup (example Agent using SPADE) and some utility functions
- ▶ Structure to solve exercises in

## Demo

## Note

We recommend to use the Docker-Container, but a group may use their own setup and project structure.

*Please add notes how to run!*

<sup>4</sup><https://moodle.uni-luebeck.de/mod/resource/view.php?id=421670>

# SPADE

## Overview

- ▶ Asynchronous Python framework for building agents
- ▶ Agents communicate via an XMPP server
- ▶ Agents may be specified, e.g., as finite state machines

### Exercise 1

### Next Steps

# SPADE

## Overview

- ▶ Asynchronous Python framework for building agents
- ▶ Agents communicate via an XMPP server
- ▶ Agents may be specified, e.g., as finite state machines

### Hint 1

We recommend to separate the agent and the internal functionalities into multiple files/ classes/ functions.

### Hint 2

The error reporting of functions run by SPADE is not so good and multiple threads may be confusing. Thus, implement the internal mechanisms separately from the agents integration. *There is a `spade_traces.sh` script, which enables traces in SPADE state machines.*

SPADE

### Exercise 1

### Next Steps

# Exercise 1

- ▶ Auction of text documents from Wikipedia
  - ▶ Two IR agents have a corpus of text documents, want to maintain corpus by extending it
  - ▶ Auctioneer offers documents to both agents, each may give a single bid
  - ▶ Each agent has different queries to fulfil, thus different values for different documents
- Simple strategy using tf.idf and getting to know SPADE
- ▶ Next exercises improve the agents and add functionality

  - ▶ Each agent has different queries to fulfil, thus different values for different documents
- Simple strategy using tf.idf and getting to know SPADE
- ▶ Next exercises improve the agents and add functionality

## Hint 3

Python provides many useful packages, e.g., `sklearn`<sup>5</sup> is installed in our Project Package.

- ▶ Look for group and join in Moodle (until 17.11.)
- ▶ Start solving the exercise

## Help?!

If reasonable, we will have a Q&A session. Maybe even via Webex, so that everyone can use the computer they mainly work with.
